Office Action Summary

Art Unit: 1741

Claims 40-55 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In the amendments filed on November 15, 2000 and January 25, 2001, all pending claims were canceled and new claims 40-55 were filed. These claims are considered to introduce new matter. The previous claims recited apparatus which included a fluid reservoir, a process bowl suspended within the fluid reservoir, and a bowl leveler for leveling the process bowl relative to the fluid reservoir. New claim 40 recites a frame and a bowl leveler for leveling the process bowl relative to the frame. Basis in the specification as filed is not apparent.

New claim 47 recites a reactor for processing single wafers "pursuant to fabricating microelectronic components". Reference in the specification as filed to fabricating microelectronic components is not apparent. Additionally, claim 47 recites fluid cup and a process base and a leveling mechanism disposed about the process base to allow leveling of the fluid cup. Basis in the specification as filed is not apparent.
